precision parts engineering

about us

In operation since 1980, PPE Heads a was originally an automotive engineering business specializing in the reconditioning of diesel engines.

PPE-Australia was founded in 2007 and saw the next level of innovation within the industry with the creation of a highly automated production facility in Sydney. PPE-Australia has already spent \$2.3 million on R&D since inception, which reflects our commitment to continual innovation and superior

quality. As a direct result of this, PPE-Australia supplies the three largest European distributors of truck spare parts and is the only aftermarket manufacturer of heavy diesel cylinder heads in Australia, producing new heads for the MAN and Mercedes diesel truck engines.

The company has grown from strength-to-strength, highlighted in 2011,2012 and 2013 by the Australian Institute of Export's recognition of

PPE-Australia's extraordinary performance in the international arena. All of this would not have been possible without the vision and uncompromising attention to the highest quality standards adopted by PPE-Australia's small and dedicated team of industry experts.

The growing emergence of grid-tied and off-the-grid electricity generation via bio-gas or LPG challenged the PPE-Australia team to modify

and improve these heads with much higher specifications. PPE-Australia is now proud to add these new MAN gas cylinder heads to our existing product offerings.

In addition to supplying the Australian aftermarket, PPE-Australia exports to Europe, Middle East, Far East, Latin America and Africa.
